

## Dual In-Line Leadframes (G-Type)

Also known as Dual In Line Pin as well as edge clip connectors. Typical applications include resistor networks, hybrid circuits and PCB terminations. DIL leadframes are available with pitches of 1.27mm to 2.54mm, and "F" and "G" outlines as detailed in the catalogue. Customised versions and special designs are also possible.

## Pre Plating Specification

<b>Type of plating:</b>	Hot Tin Dip
<b>Plating Code:</b>	1A = 100% Sn
<b>Thickness:</b>	3 to 7 Microns
<b>Shelf life:</b>	1 Year from date of despatch: Depending on storage conditions
<b>Finish:</b>	Bright
<b>Melting Point:</b>	232°C (Approx.)
<b>Ageing Test:</b>	Test to be performed in accordance with BS 2011 Test "Ta" <ol style="list-style-type: none"><li>1) Accelerated ageing for 16 hours at 155°C</li><li>2) Immersion in SM/NA flux for 5 seconds</li><li>3) Immersion in solder at 250°C ±5°C for 5 seconds, No Dewetting Permissible</li></ol>
<b>Hot Plate Test:</b>	Place material on Hot Plate at 325°C minimum for a period of 20 seconds from melting point. Both sides of material to be inspected, Top side to be considered as test side. No Dewetting Permissible. Pin holes acceptable (Areas less than 0.125mm) Maximum of 20 per 50mm <sup>2</sup> area

## Post Plating Specification

<b>Type of plating:</b>	Electroplated
<b>Plating Code:</b>	4 to 8 Microns Pure Tin, Matt Finish (Non Reflow) <b>4A</b> – Pure Tin <b>4B</b> – Nickel flash under Pure Tin <b>4C</b> – 0.25 Micron Min Nickel under Pure Tin

The Nickel Flash is believed to reduce the risk of Tin whiskers forming, but can cause the tin to discolour during the reflow process. The discolouration does not affect the solderability.

The advantage of post plating over pre plating is that there are no bare edges and therefore a better solder joint should be achieved.

Other plating specifications on request include 4 to 8 Microns 60/40 Tin/Lead for RoHS exempt products Designation "2A"

<b>Shelf life:</b>	1 Year from date of despatch: Depending on storage conditions
<b>Melting Point:</b>	Pure Sn 231.9°C
<b>Ageing Test:</b>	Test to be performed in accordance with BS 2011: Part 2.1T:1981 Method 1, ageing 3. 1) Accelerated ageing for 16 hours at 155°C 2) Immersion in non-activated flux for 5 seconds 3) Immersion in solder at 235°C ±5°C for 5 seconds, The dipped surface shall be covered with a smooth bright solder coating with no more than small amounts of scattered imperfections such as pin holes and dewetting. Within the significant surface these imperfections shall not exceed 5% of the area.
